### **United Envirotech Ltd secured an EPC Contract Worth RMB 264 Million to Construct a 100,000 m<sup>3</sup>/day MBR Plant in Guangzhou, China**

---

The Board of Directors of United Envirotech Ltd. (“UEL” or the “Company”) is pleased to announce that it has secured an Engineering Procurement and Construction (EPC) contract to build China’s largest municipal Membrane Bioreactor (MBR) plants in Guangzhou City.

The Contract is the Group’s largest EPC contract in terms of both value and treatment capacity. The project also represents an engineering milestone for the Group. As the wastewater treatment plant is located at the densely populated Guangzhou City, careful consideration is incorporated into the design of the plant to minimize foot-print and any disturbance to the neighboring communities. The plant is constructed in 3 levels occupying merely 1.6 hectare of land. This is less than 10% of area occupied by a conventional wastewater treatment plant of same capacity. With totally enclosed design and state-of-art odour control and noise control facilities, it keeps emissions from the plant to a minimal. In addition, the treated water will be able to comply with the most stringent discharge standard and will be used for recreation purpose.

The wastewater treatment plant is to be completed by June 2010 and is one of the projects ear-marked to improve the City’s overall environmental performance in preparation for the Asian Game in 2010, which Guangzhou City will host.

Commenting on the project win, Dr Lin Yucheng, Chairman and CEO of United Envirotech said, “We are honored to be selected for this prestigious project. It is an endorsement on our technology and engineering capability. MBR technology with advantages such as small foot-print, good treated water quality is most suitable for this project. We are the pioneer in MBR technology and I believe our established track record in MBR and project execution is the key for us winning the contract.”

The total contract sum is RMB 264 million which includes a 1 year operation and maintenance contract. The project is expected to impact positively the Groups FY 2010 performance.

None of the Directors and controlling Shareholders has any interest, direct and indirect in the Proposed Acquisition.
